## CAREER OBJECTIVE

To work in domains where performance is rewarded with new responsibilities and knowledgeable environment to grow along with the organization as a core member of the same.

## Experience SUMMARY

- Embedded professional possessing **6.5 +years** of extensive **Automotive embedded** industry experience in analysis, Configuration, development, Integration, validation of the **Automotive** domain projects. Hands-on experience in **Development, Integration** and **Validation** (Embedded-C programming) of the Controller based Peripherals with **AUTOSAR** compliance.
- Good Understanding on **AUTOSAR** architecture for Automotive domain.
- Knowledge of computer vision, **AI/ML** model integration, and sensor fusion, stitching
- Good knowledge on the SDLC life cycle for Requirement analysis and Development and testing.
- Good knowledge on the standards like ISO-26262, ISO-14229, ISO 15765-2& MISRA (2004).
- Good experience in AUTOSAR DCM stack configuration & sources generation and integration.
- Good knowledge on Autosar COM stack and RTE.
- Experience in the usage of EB Tresos tool & DaVinci configurator tools for AUTOSAR stack configuration & integration for Project specific.
- Exposure to Vector CAN testing tool CANalyzer/Canoe

## TECHINCAL SKILLS

- Programming Languages: C, Embedded C and C++, Python (Basics)
- Microcontrollers: RH850, STM32, Infineon Aurixtb26xx
- Communication Protocol: **CAN**, UDS, I2C, SPI and UART
- Vector Tools: **Davinci Configurator, Davinci Developer, Canoe and VectorCast**
- Standards: ISO-11898, ISO-15765-2, ISO-14229, MISRA & **Autosar**
- Software Configuration Management: SVN, PTC, GIT
- Requirements Management System: Doors, **JIRA, PTC**
- Testing and debugging tools: - Vector **CANoe**, Win Idea, Trace32, Serial loader and DSA.

## WORK EXPERIENCE

| Organization                   | Duration            | ROLE                     |
|--------------------------------|---------------------|--------------------------|
| S2 Technology Gmbh             | Nov 2025 – Till now | Senior Software Engineer |
| Wipro                          | Oct 2023 – Aug 2025 | Senior Software Engineer |
| Supremology Software pvt Ltd.  | Nov 2020-Sept 2023  | Software Engineer        |
| Epitome Components Pvt Limited | Dec 2017- June 2019 | Trainee Engineer         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                 |

| <b>Description:</b> Experienced in working for automotive products for vehicle High performance computer designed by Felix system. The main objective of products would be to check the RADAR, CAMERA, LIDAR, GPS, MSP AND RVA related sensors in the vehicle for optimum performance and induce the vehicle dynamic information.                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                 |

**Role:** AUTOSAR ASW developer

**Responsibilities:**

- Involved in Requirement analysis.
- Involved in CDD (Driver development activity)
- Configured the RTE layer for signals to map to SWC (Event and Data)
- Used both Davinci configurator and Developer for project related work.
- Bug fixes and debugging and troubleshooting the error.
- Involved in Code reviews, documents reviews and task reviews.
- Performing QAC, Polyspace and google test related testing to ensure quality.
- Involved in Test cases preparation and test report generation.
- Worked on build activities and testing.

**Description:** Experienced in working for automotive products for vehicle active safety. The main objective of products would be to calculate how and when to change gears in the vehicle for optimum performance, fuel economy and shift quality.

**Role:** Autosar DCM Stack developer

**Responsibilities:**

- Analyze and understand the requirements for DIAG customer spec (Part2) and ISO standard 14229.
- Done the Configuration for the AUTOSAR DCM Stack modules like DSD and DSP mainly for the SID, DID, SUB ID, RID and Implemented the business logic on necessary condition.
- Developed the test case for the All services and DIDs and tested using CANoe and trace32 Debugger.

**Description:** This project basically worked for ADAS feature Lane departure warning. when the vehicle is driving on road it will trigger and alert when you cross the Lane to driver to take control the vehicle on track for the scope and my responsibility of the project development and configure the DCM stack using Autosar tool and do the test for the module.

**Role:**

DCM Stack developer and Integration.

**Responsibilities:**

- Analyze and understand the requirements for DIAG customer spec (Part2) and ISO standard 14229.

SID, DID, SUB ID, RID and Implemented the business logic on necessary condition.

- Developed the test case for the All services and DIDs and tested using CANoe and Winidea Debugger.
- Part of the Continuous integration Team. I have gained the knowledge on CI and CD.
- Using Integration steps completed the integration process and deliver the software to suppliers.

**Description:** - Experienced in working for automotive products for vehicle active safety. The main objective of products would be to control Vehicle Dynamics when the driver loses control over the vehicle, and to ensure vehicle stability and safety. Worked for such Active safety products like.

**Role:**

AUTOSAR DCM stack developer

**Responsibilities:**

- Involved in Requirements analysis.
  - Involved in DCM and DEM Stack Development Configuration using vector Davinci.
  - Configured the RTE layer for Signals to map to SWC (Event and Data).
  - Implementation of DID's and RID's using Davinci Configurator and Developer
  - Big Fixes and debugging and trouble shooting the error or analysis.
  - Involved in Reviews.
  - Performing **QAC**, **Polyspace** and **Vector cast** related testing to ensure quality and code coverage percentage.
  - Involved in Test cases preparation and test report generation.
- 
- Worked on Build activities and testing.

| <b>Project Name:</b> | <b>Accident alerting system</b>    |
| <b>Role</b>          | Embedded Engineer                  |
| <b>Organization</b>  | <b>Epitome Components pvt ltd.</b> |
| <b>Team Size</b>     | 3                                  |

**Contribution:**

- Developer of the Project.
- Used Arduino in the project and develop the code in embedded C prog and to update/modify various tasks which was done manually by the team. Pressure sensor used the vital role in this project.
- Started with using GSM in 8051 microcontroller and STM32 L4 microcontroller will get the results successfully.
