

Arun Kumar Yadav Senior Site Reliability/ DevOps Engineer

✉ Arunkumary001@gmail.com ☎ 8802710733 📍 Bangalore, India 🔗 [linkedin.com/in/arun-yadav-39501/](https://www.linkedin.com/in/arun-yadav-39501/)

PROFILE

Senior DevOps / Site Reliability Engineer with 5 years of experience in building, operating, and supporting highly available cloud-native platforms. Strong expertise in CI/CD, Kubernetes operations (AKS/EKS), Infrastructure as Code (Terraform, Ansible), observability, and incident management. Proven ability to reduce MTTR by ~25–30%, improve deployment reliability, and reduce operational toil through automation, standardized release practices, and SRE principles. Experienced in collaborating with platform, development, and security teams in Agile environments.

PROFESSIONAL EXPERIENCE

SLK Software, Senior DevOps / Site Reliability Engineer Emerson

04/2025 – Present | Bangalore

- Built end-to-end observability for Azure workloads using Managed **Prometheus**, **Grafana**, and **Azure Monitor**, reducing MTTR by 25% and false alerts by 30%.
- Designed monitoring for **Azure Kubernetes Service (AKS)**, PostgreSQL, and HTTP endpoints with **Service Level Objective (SLO) and Service Level Agreement (SLA)** dashboards and actionable alerting.
- Delivered infrastructure changes through Infrastructure as Code (IaC) using **Terraform and Ansible** with standardized modules, approval workflows, and policy guardrails to improve release safety and compliance.
- Partnered with product owners and platform engineering teams to define golden signals and production-readiness checklists for new services.

Fifth Third Bank

- Automated operating system patching and application deployments using **Ansible and Jenkins**, reducing manual effort by 70%.
- Enabled event correlation and auto-baselining in Dynatrace, reducing **P1/P2 incidents by ~20%**.
- Introduced runbooks and incident-response playbooks integrated with **PagerDuty and Opsgenie**, improving on-call consistency and time to mitigation.
- Acted as a Build-and-Release-focused Site Reliability Engineer, owning **CI/CD pipelines** and production release workflows across Kubernetes platforms.
- Designed and enforced release **Service Level Objectives (SLOs)** and post-deployment health checks using **Prometheus, Grafana, Dynatrace, and Splunk**, reducing rollback frequency and improving MTTR by 25–40%.
- Implemented **blue-green and canary** deployments on auto-scaling infrastructure integrated with Jenkins.

1Finance | Atrina Technologies, DevOps / SRE Engineer

04/2024 – 09/2024 | Mumbai

- Supported cloud-hosted, production-grade applications with a strong focus on reliability, performance, and scalability, using **AWS (EC2, EKS, ELB, Auto Scaling)** and **Linux-based systems**.
- Implemented and maintained **CI/CD pipelines** using **Jenkins, Git, and Maven**, enabling automated **build, test, deployment, and rollback** workflows across multiple environments.
- Supported **containerized workloads on Kubernetes**, managing Deployments, Services, ConfigMaps, Secrets, HPA, and Rolling Updates, with container images built using **Docker** and stored in container registries.
- Automated infrastructure provisioning and configuration management using **Terraform (IaC)** and **Ansible**, significantly reducing manual setup effort and ensuring consistent, repeatable environments.
- Monitored **logs, metrics, and alerts** using **Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)**, and **CloudWatch**, enabling proactive anomaly detection and faster incident resolution.
- Collaborated closely with **engineering and QA teams** using **Jira, Confluence**, and **Agile/Scrum** practices to improve deployment safety, release reliability, and overall operational stability.

Oracle Cerner India, DevOps / SRE Engineer

06/2021 – 12/2023 | Bengaluru

- Supported enterprise-scale, production platforms with **CI/CD-driven** release processes across **development, staging, and production** environments using **Jenkins, Git, Maven**.
- Worked on **Kubernetes-based deployments**, ensuring correct configuration, resource allocation, and release stability using **Docker, Kubernetes (EKS), Helm, ConfigMaps, Secrets, HPA, and Rolling/Canary deployments**.
- Implemented **monitoring and alerting** to track **system health, performance, and availability** using **Prometheus, Grafana, ELK Stack, CloudWatch**, and alerting integrations such as **PagerDuty / Opsgenie**.
- Participated in **24x7 on-call rotations**, handling **P1/P2 production incidents**, performing **root cause analysis (RCA)**, and contributing to **post-incident reviews (PIRs)** using incident management and ITSM tools.
- Collaborated closely with **SRE, platform, and security teams** to improve operational standards, system reliability, and compliance, implementing **RBAC, IAM policies, security scans, and audit controls**.
- Contributed to stability and automation initiatives using **Terraform, Ansible, and shell scripting**, reducing deployment-related incidents, manual intervention, and MTTR.

Azeus Convene India, DevOps Engineer

06/2020 – 06/2021 | Noida

- Supported **cloud-hosted applications** across **Linux and Windows environments**, working with **AWS (EC2), Windows Server, Ubuntu**, and basic system administration tasks.
- Assisted with **CI/CD execution, deployment validation, and release coordination** using **Jenkins, Git, and artifact repositories**, ensuring successful builds and environment readiness.

- Performed **log analysis and basic monitoring** to support **incident troubleshooting and recovery** using ELK Stack, CloudWatch, application logs, and system metrics.
- Helped document operational procedures and best practices using **Confluence, SharePoint, Markdown documentation**, and runbooks to improve team efficiency and onboarding.
- Worked under senior engineers to learn and apply **DevOps and production operations fundamentals**, including **Docker basics, Kubernetes concepts, Infrastructure as Code (Terraform), and automation scripting (Shell)**.

SPECIALIZED SKILLS

- Acted as **Lead DevOps/SRE** for **public-facing, production-critical platforms**, owning **incident response, on-call operations, stakeholder communication**, and driving **DevOps and SRE best practices** across teams.
- Designed and implemented **AI-driven observability and anomaly detection**, enabling **proactive incident prevention**, faster **MTTR**, and improved **system reliability**.
- Led **capacity planning, predictive analytics, and cost optimization**, ensuring efficient **auto-scaling** and sustained **SLA/SLO compliance** for high-traffic workloads.
- Diagnosed and resolved **Java application performance issues** (memory leaks, GC pauses, thread contention, slow APIs) using **JVM monitoring, profiling, and log analysis**.
- Architected, implemented, and tested **High Availability (HA) and Disaster Recovery (DR)** strategies, including **failover, backup validation, and resilience testing** for enterprise systems.
- Built and standardized **monitoring, logging, and observability platforms** using **Prometheus, Grafana, and ELK Stack**, improving visibility and reducing production incidents.
- Designed and maintained **CI/CD pipelines** automating **build, test, release, and deployment workflows** using **Git, Jenkins, container registries, and Kubernetes**.
- Led **application modernization and cloud-native adoption**, migrating monolithic systems to **Docker- and Kubernetes-based architectures** for improved scalability and deployment reliability.
- Owned **security, compliance, and vulnerability management**, performing audits, patching, access control reviews, and participating in **24x7 on-call rotations**, RCA, and post-incident reviews.

TOOLS & TECHNOLOGIES

AI/ops & Observability AI:

- Dynatrace Davis AI (Anomaly Detection, Root Cause Analysis)
- Predictive capacity analytics (CPU, memory, pod saturation forecasting)

AI / LLM Skills: Prompt Engineering, Llama / open-source LLMs, Agentic AI workflows, Fast API, LlamaIndex

Operating Systems: Linux, Windows Servers & Web: NGINX, Apache HTTP, Apache Tomcat, JBoss Cloud Services: AWS, GCP, Azure

Configuration & Infrastructure Management: Ansible, Ansible Tower, Terraform CI/CD Tools: Jenkins, Harness CI/ CD, Argo CD

Container Technology: Docker, Docker-Compose, Kubernetes

Helm Database: PostgreSQL, MySQL, RDS

Monitoring & Logging Tools: Grafana, Prometheus, Cortex, Fluentd, File beat, Net diagnostic, Splunk, ELK Stack, Dynatrace, Google Cloud Monitoring, Amazon CloudWatch, ThousandEyes, AI observability

Security & Vulnerability: SonarQube, Rapid7 Nexpose, CrowdStrike Falcon

Ticketing Tools: JSM, ServiceNow Version Control: GitHub, GitLab

Incident Management & Automation: PagerDuty, Opsgenie, StackStorm, Shell scripting, AWX

Artifact & Image Management: Docker Trusted Registry (DTR), Harbor, Nexus Messaging & Streaming: RabbitMQ, ActiveMQ, Kafka

Documentation & Collaboration: Confluence, SharePoint, Google Workspace, Microsoft Teams + OneNote VPN Solutions: Libreswan, StrongSwan

ENGINEERING INITIATIVES

- Designed and developed a **web-based Terraform self-service dashboard** integrated with an **AI chatbot assistant**, enabling guided infrastructure provisioning, faster onboarding, and improved developer experience.
- Built a **Python-based AI log summarization and incident analysis tool** using **LLM APIs**, automatically analyzing production logs to generate **incident summaries, probable root causes, and remediation hints**, reducing manual triage effort.
- Leveraged **AI-assisted tooling** to **optimize Terraform modules and CI/CD pipelines**, improving **pipeline execution efficiency**, reducing **configuration drift**, and minimizing **human errors** in infrastructure deployments.

EDUCATION

Bachelor of Technology (B.Tech.), Dr. A.P.J. Abdul Kalam Technical University

2014 – 2018

CERTIFICATIONS

Certified SAFe® 5 Agilist

Scaled Agile, Inc.
