PROFILE SUMMARY

Results-driven Android expert with 7+ years of experience, excelling in architecture design, performance optimization, and cross-functional collaboration.

TECHNICAL SKILLS

- **Programming Languages:** Java, Kotlin
- **Architecture:** MVI, MVVM, MVP
- **Dependency Injection:** Dagger, Hilt
- **UI & state management:** Compose, Data & View binding
- **Async Programming:** Coroutines, Flow, RxJava
- **Background Processing:** WorkManager, AlarmManager
- **Image Library:** Glide, Picasso
- **Networking & API:** Retrofit, Postman, Charles
- **CI/CD:** Jenkins, GitHub, Bitbucket
- **Database:** Room, SQLite, MySQL
- **Tools & Platform:** Gradle, Android Studio, Xcode
- **Testing & Code quality:** JUnit, Mockito, JaCoCo

RECOGNITIONS

- **3rd Place – Meesho GenAI Hackathon:** Secured top-3 position among **60+ teams and 350+ participants** in a 30-hour non-stop coding hackathon.
- **Panchayat Quarterly Awards Winner (2x):** Recognized twice for consistent high-impact contributions and engineering excellence at Meesho.

WORK EXPERIENCE

Meesho

2022 - PRESENT

Software Development Engineer II

- **Architected design token system** using Style Dictionary, automating Android XML and Kotlin code generation from Token Studio JSON, reducing manual updates by **90%** and ensuring design-code consistency.
- Optimized **app startup performance** by reducing Config API overhead using connection reuse and networking optimizations.
- Designed resilient platform infrastructure, including **CDN-cached fallback APIs** and multiple production crash and **memory leak fixes**, improving app stability at scale.
- Designed and shipped a **session-level UI performance monitoring** framework with Play Console parity, improving detection and resolution of jank and frame drops.
- Owned and implemented end-to-end **Android Search platform**, including Auto-Complete, Search Landing Page, and Recent Searches revamps to improve discovery, personalization, and reduce drop-offs.
- Built a **WebSocket-based** Speech-to-Text feature streaming raw audio for real-time transcription and model training.
- Led migration from offset-based to **cursor-based pagination** across critical feeds (FY, CLP, Collections, Search, PDP Reco), fixing premature pagination issues caused by OOS filtering.
- Leading SuperStore (Grocery) Home & Discovery migration from **WebView to Native SDUI Compose**, enabling faster UI iteration and reducing journey latency.
- **Optimized Visual Search** by consolidating multi-step image upload flows into a single multipart API, reducing end-to-end latency and payload size.
- Refactored Sort & Filter into intent-driven, **lazy-loaded APIs**, cutting eager fetches in ~92% of sessions and significantly reducing **backend costs**.
- Led large-scale **cost and network optimizations** by designing in-memory caching for Widget APIs, reducing redundant fetches and improving scroll/filter responsiveness for **~600K** daily interactions.
- Built **custom UI infrastructure** such as intent-based sticky High Visibility Filters and global Lottie error handling to improve UX consistency.

Paytm

2020-2022

Software Engineer

- Fixed bugs by analyzing and debugging critical application issues such as crashes,
- memory leaks and concurrency problems.
- Work with team members to successfully migration Paytm App to Android 11 changes.
- Coordinate with QA team and Integrated Jacoco code coverage to measure the test cases.

Celstream Technologies India pvt Ltd

2017- 2019

Software Engineer

- Design, develop and implementation of the entire application, from initial phase to uploading to playstore
- Implementation of wifi connection to communicate with hardware device.

EDUCATION

Computer Science and Engineering, B.E

2013-2017

SJB Institute of Technology, Bangalore

GPA / Percentage: 76.8%
