

# Aditya Padhmakar

Java Backend Engineer — Spring Boot, Microservices, Distributed Systems

+91 7982642043 | adityapadhmakar99@gmail.com | linkedin.com/in/aditya-padhmakar | Bangalore, India

## PROFESSIONAL SUMMARY

---

Java Backend Engineer (SDE-2) with 4+ years of experience building and owning backend systems in fintech/workforce platforms and e-commerce. Strong in system design, API design, data modeling, and asynchronous processing under real-world constraints such as multi-country compliance, scalability, reliability, and performance. Experienced in owning services end-to-end, making architectural trade-offs, handling production issues, and improving system robustness through disciplined engineering and testing practices.

## CORE TECHNICAL SKILLS

---

- **Languages:** Java, SQL
- **Backend & Frameworks:** Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs
- **Databases & Caching:** MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch
- **Messaging & Integration:** RabbitMQ, SQS, Feign Client
- **System Design:** HLD/LLD, Distributed Systems, Event-Driven Architecture, Circuit Breakers, Load Balancing
- **Cloud & DevOps:** AWS, Docker, Kubernetes, GitHub CI/CD
- **Quality & Reliability:** Unit & Integration Testing (JUnit, Spock, WireMock), Idempotency, Fault Tolerance
- **Tools:** IntelliJ IDEA, Git, Postman, JIRA

## PROFESSIONAL EXPERIENCE

---

**Papaya Global**

**Software Development Engineer II**

**Bangalore, India**

**Apr 2024 – Present**

- Designed and owned the worker onboarding and contract finalization platform, reducing end-to-end activation time from 7 days to under 5 hours by redesigning workflows and introducing asynchronous orchestration.
- Developed compensation change and leave approval engines supporting country-specific compliance rules, enabling customers to independently manage workforce changes across 100+ countries reducing cycle time from 10 days to 2 days.
- Improved system performance and resilience by implementing async processing with RabbitMQ and SQS, along with circuit breakers, retries, and DLQs, reducing processing latency by 50%.
- Architected extensible data models using PostgreSQL (JSON templates), MongoDB schemas, and optimized indexing, reducing compliance rule rollout effort by 60%.
- Engineered robust RBAC (Role-Based Access Control) frameworks using Spring Security, achieving 100% compliance with security audits and preventing unauthorized data access in production.

**IndustryBuying**

**Software Developer**

**New Delhi, India**

**Aug 2021 – Mar 2024**

- Developed and enhanced the Order Management System, handling end-to-end order, return, inventory, and payment flows using an event-driven pub/sub architecture.
- Improved order fulfillment speed by 25% and reduced manual intervention by 35% through workflow automation and service-level optimizations.
- Boosted search performance and relevance by implementing fuzzy search, filters, and optimized indexing in Elasticsearch, reducing query latency by 40% and increasing user engagement by 12%.
- Cut catalog update cycles from 2 days to 5 hours using Redis caching and asynchronous data propagation to Elasticsearch via scheduled jobs.

## EDUCATION

---

**Chitkara University**

**Bachelor of Engineering in Computer Science — CGPA: 9.84/10**

**Punjab, India**

**2018 – 2022**
